

The modular inspection systems from **Deltapix Aps** (distributor **jumavis GmbH**) and the DeltaPix InSight 7.0 software are designed for microscopy or macroscopy applications. The software for precise measurement, analysis and control of microscopes, cameras, motorized tables and other devices offers a simple user interface. It includes a basic package (included free of charge with most DeltaPix cameras) and a range of optional additional modules. The software can be used to calibrate several cameras and microscopes individually. An individual exposure time and depth of field can be defined for each lens or magnification.
